

Dapper employees have a challenging and ever-changing role working in a complex and dynamic environment. We are looking for a front-end software engineer. You should have a passion for shipping elegant, interactive Flash applications and web interfaces that will be viewed by millions across the web.

Position Summary

This position entails working with Dapper's engineering and accounts teams to develop and ship Flash applications, advertisements, and web interfaces. The role provides an excellent opportunity to shape how content is consumed and distributed on the Internet through the use of a wide range of technologies.

Responsibilities

- Write front-end code in Flash/Flex (ActionScript 3.0), HTML/CSS, and Javascript
- Build ads and applications in Flash as well as Javascript-based interactive web interfaces
- Work closely with, and incorporate feedback from, product management, interaction designers, and back-end engineers
- Rapidly fix bugs and solve problems
- Be proactive and creative
- Work on tight deadlines

Required Qualifications

- Demonstrable experience building world-class, consumer facing web application interfaces and/or advertisements
- Expert Actionscript/Javascript/HTML/CSS/Ajax coding skills
- Excellent programming skills in Java, Python, or PHP
- Disciplined approach to testing and quality assurance. Willingness to work in an agile environment
- Strong command of web standards, CSS-based design, and web services
- Good understanding of web technologies (HTTP, Apache) and familiarity with Unix/Linux
- Knowledgeable foundation in interaction design principles
- Great written communication and documentation abilities

Desired Skills

- Visual-design skills
- B.S. or higher in Computer science or equivalent
- Experience working in a Linux-based environment
- Experience in online advertising

About The Company

Dapper is all about content. Dapper was founded in 2006 to enable content to surface in the right place, at the right time, for the right person. Dapper's technology allows advertisers to dynamically incorporate their offers and content directly into their display advertising without engineering integration. Their offers are matched in real-time with user demographics and publisher website content. The offers are brought dynamically from their website into their ads without the need of an existing API or feed.

Our customers include major travel agencies, hotel chains, retail and ticketing companies. We are startup full of passionate people, trying to change the way advertising works on the web. We are backed by Accel Partners and are situated in San Francisco close to public transit.

Applying for the Job

Please submit your portfolio and resume via email to jobs-eng@dapper.net and include "Front End Engineer" in the subject. Only candidates who send portfolios will be considered.

No agencies or recruiters, please.
